

Three redesign ideas (plain-language TLDR)

Same look as the reference picture.

Only features we already have — or can add with a little UI work.

The reference picture

Rule of thumb: no geofences, no missions, no shift boards, no fancy predictions. If we don't already track it, it doesn't go in these designs.

What we have vs the picture

TLDR: We already track trucks live (map, speed, fuel, path replay) and manage vehicles, drivers, users, and audit logs. The picture mainly adds a richer home screen — big numbers, a fuel overview ring, clearer colors on the map, and a short “pay attention” list. Those are easy. Things like geofences and mission boards are not in the product yet — we skip them.

Live map with trucks	Yes	No
Replay a truck's past path	Yes (Map page)	No
Vehicles & drivers	Yes	No
Fuel tanks on truck detail	Yes	No
Live speed / fuel / location	Yes	No
Company users & audit log	Yes (admins)	No
Big number cards on home	No	Easy — use live data we already get
Fuel ring (high / mid / low)	No	Easy — group by fuel %
Map color legend	No	Easy — UI only
Fuel bar on home cards	No	Easy — show fuel we already have
Search / filter on home	No (only on lists)	Easy
Simple “needs attention” list	No	Easy — low fuel, offline, sensor oddity
Geofence / leave-zone alerts	No	Skip for now
Missions / shifts / reports	No	Skip for now

What every idea reuses

- Same menu: Dashboard, Vehicles, Drivers, Map, Users, Audit, language/theme.
- Same live data: speed, fuel level, location.
- “Details” still opens the truck page we already have.
- “Needs attention” only means: low fuel, no signal, or a sensor look-odd.

Fleet Pulse — “home that feels alive”

TLDR: Make the home page look like the picture. Show how many trucks are moving, stopped, or low on fuel. Add a simple fuel ring, a clearer map, a short attention list, and fuel bars on truck cards. No new product ideas — just a better layout of what we already know.

In plain words

- **Already there:** map, truck cards, truck detail with tanks, live updates.
- **Easy add:** four big numbers (total / moving / stopped / low fuel).
- **Easy add:** fuel ring (full / mid / low) + Offline when there's no signal.
- **Easy add:** map colors + legend; fuel bar on each card.
- **Easy add:** small list: low fuel, offline, sensor check — tap opens truck detail.
- **Not in this idea:** geofences, workshop status, missions, service reminders.

Design

Scenario 1 — Fleet Pulse

Map-First — “the map is the product”

TLDR: Put the big map in the middle. Keep a thin side list of trucks with speed and fuel. At the bottom, make path replay (1h / 6h / 24h) easy to reach — we already built that on the Map page. Best if people live on the map all day.

In plain words

- **Already there:** live map, path replay, fuel in map popups, open truck from marker.
- **Easy add:** small counts — how many trucks, how many with live signal, how many low fuel.
- **Easy add:** “recent trucks” list with speed and fuel %.
- **Easy add:** map legend (moving / stopped / offline / low fuel).
- **Easy add:** quick path-replay bar using the time ranges we already support.
- **Not in this idea:** geofence zones, missions, stations as a new module, reports.

Design

Scenario 2 — Map-First Trajectory Hub

SCENARIO 3

Fuel Health — “fuel first, everything else second”

TLDR: Lead with fuel. Big numbers show how full the fleet is. Map colors follow fuel level. Cards highlight the fuel bar. Filters: All / Low fuel / Offline. Best if “how much fuel is left?” is the main daily question.

In plain words

- **Already there:** live fuel %, tank diagram on truck detail, sensor/resistance panel.
- **Easy add:** average fuel % + counts for high / mid / low tanks.
- **Easy add:** map markers colored by fuel band.
- **Easy add:** attention list: low fuel, no live signal, sensor oddity.
- **Easy add:** search + simple filters on the home cards.
- **Not in this idea:** predicting when fuel runs out, dispatch buttons, geofences, a full alerts app.

Design

Scenario 3 — Fuel Health Desk

Which one to pick?

TLDR: Pick by what people stare at all day — overview, map, or fuel.

1 • Fleet Pulse	You want the picture's home screen, almost as-is.	Today's dashboard + map + cards
2 • Map-First	People mostly watch the map and replay paths.	Map page + path replay we already have
3 • Fuel Health	Fuel levels are the #1 daily question.	Tank/fuel screens + live fuel numbers

Simple recommendation: start with Scenario 1 on the dashboard (closest to the picture, least new stuff). Borrow Scenario 2's path-replay strip for the Map page. Use Scenario 3's fuel buckets as the shared numbers model.
